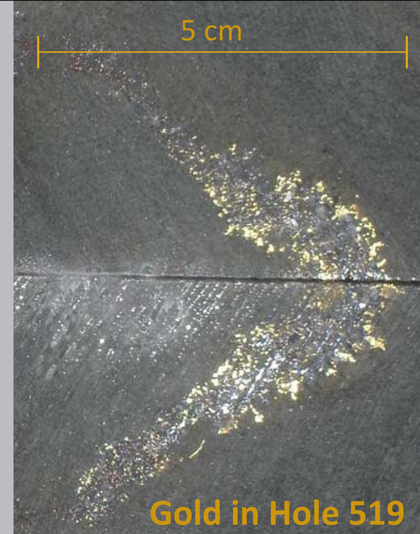
Experience Vision Exploration



Gold in Hole 519

Cinderella Zone
556.10-556.23 m:
5,750 g/t over 0.13 m
(168 oz/t over 0.43 ft)

Yorbeau Resources Inc.

(TSX: YRB.A) is a gold exploration company with 100% interest in a large property (26.68 km^2) on the Cadillac-Larder Lake Break of the famed Abitibi Greenstone Belt of Quebec. Quebec is considered to be the most welcoming mining jurisdiction in the world[1]. The Rouyn property, covering a 12 km strike length of the Break, is located a few km from the town of Rouyn-Noranda. The town provides easy access to the labour pool and infrastructure of the Noranda mining camp. Yorbeau has impressive assets in place, including a property with exceptional exploration potential for gold in late-Archean lode-gold deposits.

[1]Fraser Institute

Our 2010 exploration program is building on the significant results of 2008 and 2009. Two distinct gold-bearing zones, one hosted by the Piché Group and the other by the “footwall zone”, have been drilled over a strike length of over 4,000 meters. These results clearly illustrate the high exploration potential of our Rouyn property.

A $3 million Exploration Program is underway with a minimum of 20,000 m of NQ diamond drilling directed at following high-grade gold zones laterally and down plunge. The drilling program started in January 2010:

- **Piché Group target**: Altered mafic and ultramafic rocks of the Piché Group are host to high grades of gold at both the Lake Gamble and Cinderella targets on the Rouyn property. Gold, often coarse free gold, is associated with quartz veining, silicification and carbonate alteration of the host rocks. Drilling at Lake Gamble has defined a 400 m x 100-300 m gold mineralized body that is up to 7 m in true width. Another body occurs at Cinderella and holes 400 m apart have cut grades up to 27 g/t Au over 3 m true width.
- **Footwall target:** The footwall zone occurs in metasediments that structurally underlie the Piché Group. High grades of gold are associated with intense silicification, quartz veining, arsenopyrite, pyrrhotite, pyrite and brown tourmaline. True widths of gold mineralization in the zone range up to 7 meters. High gold contents occur in the zone over a strike length of over 4,000 m, from the Augmitto deposit to the Astoria deposit.
- **Bonanza grades of gold found in the footwall zone at the Cinderella target (see photo in upper right corner)**

ROUYN PROPERTY

MANAGEMENT AND BOARD

TSX: YRB.A

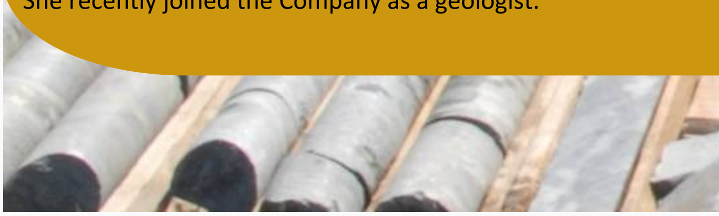
One of Yorbeau's strengths, complementing the potential of its properties, lies in the talent and experience of its officers and directors, who as a group are major shareholders in the Company. Yorbeau employs highly-experienced geologists and its Board of Directors include exploration professionals and financiers with profound knowledge of the natural resources business. Together, Yorbeau's people constitute a team that is expert in every aspect of gold exploration.

Dr. Thomas L. Robyn, the Chief Executive Officer of Yorbeau, earned a geology degree from Western Michigan University, and a doctorate in igneous petrology/volcanology from the University of Oregon. He has over 30 years experience in mineral exploration planning and implementation, mineral property reviews and project management. Dr. Robyn is supported by Gérald Riverin, Laurent Hallé and Geneviève Carignan, all highly-qualified geologists.

Mr. Gérald Riverin obtained his Ph.D. from Queen's University in 1977. He has been involved with the development of several mineral properties and is internationally renowned as an expert on the geology of volcanogenic massive sulphide deposits.

Mr. Laurent Hallé obtained a BSc in geology from the Université du Québec in 1982. He brings to the Company a wealth of experience in exploration planning, property acquisition, planning and supervision of diamond drill programs, and exploration crew management.

Ms. Geneviève Carignan obtained her BSc in geology from the Université du Québec in 2006. She recently joined the Company as a geologist.



ASSETS IN PLACE

Infrastructure from $45 million investment on the Augmitto Block by the previous owner (who went bankrupt in 1988).

Extensive surface and underground development on the Augmitto Block, with facilities that include a maintenance building, a 1,142-metre exploration ramp, a 250-metre-deep shaft and extensive drifting on several levels.

The Astoria Block also has extensive underground workings including a 515-metre-deep shaft and development drifts on several levels.

Extensive historical databases on both the Augmitto and Astoria deposits.

A **2005 NI 43-101 compliant** resource estimate on the Astoria Block showing an undiluted underground resource of **345,424 ounces of gold**:

	Tonnes	Grade g/t	Ounces
Measured	6,000	4.42	853
Indicated	1,964,000	4.51	284,784
Inferred	385,000	4.83	59,787
	2,355,000	**4.56**	**345,424**

Shares Outstanding: 152,987,946
Warrants outstanding: 681,050
(expiry from June 17 to July 25, 2011)
Options outstanding: 5,740,000
Insider ownership: 28%
Year Hi-Lo: $0.34 - $0.10
